

PROJECT PROPOSAL

1. Project Title:-

i Advanced Healthcare Chat Bot using Python

2. Project Scope:-

Health care is very important in everyone's life. Today people are busy with their work at home, office works and more addicted to online services in every category. So, we come up with an idea that to create a advanced health care chatbot system using AI that can diagnosis the disease and provide the patient basic information about the disease and gives them a clear idea about the severeness of their disease before consulting the doctor in person. This healthcare chatbot system is also designed to help hospitals to provide healthcare support online 24 x 7, it answers deep as well as general questions. Hospitals can add this chatbot feature in their websites so that when patients visiting the site it helps them discover specialists according to their health issue, booking their appointments, and finally helps them access to the proper exact treatment.

3. Requirements:-

Software Requirements:

1. Python
2. Tkinter
3. Csv

STUDENTS DETAILS

Name	UID	Signature
Raghu Ram	19BCS4596	Raghu Ram
Harsh Raj	19BCS4586	Harsha Raj
Arthi Reddy	19BCS4593	Arthi Reddy
Ranjit Banerjee	19BCS4619	Ranjit Banerjee

APPROVAL AND AUTHORITY TO PROCEED

We approve the project as described above, and authorize the team to proceed.
